## Jumpstart to NVivo 8

### Course Description:

The objective of the course is to equip the group with enough knowledge to enable people to begin their project using a computer-aided methodology. By the end of the workshop they will understand the advantages and limitations of using a computer for qualitative data analyses and will know how to set-up a database, how to import data and how to code data.

They will also understand the potential of NVivo as a tool for organizing, questioning and reporting on the data so that they can truly support and defend their findings.

### Topics Cover:

- Creating and navigating around your project
- Sources: Managing Digital Data
- Linking Data: Annotations, Memos and See Also
- Coding & Managing Nodes
- Cases & Attributes
- Query Data Technique
- Advance Coding
- Data Exploration
- Grouping
- Modeling
- Charting
- Reporting
